IFRA Compliance above was assessed according to IFRA Standards and to IFRA Section 6 for general safety assessment:

- The IFRA Standards are based on safety assessments by the Panel of Experts of the RESEARCH INSTITUTE FOR FRAGRANCE MATERIALS (RIFM).
- IFRA Standards are set per product category, each covering a range of product types which can be grouped together based on risk assessment considerations. Groupings have been derived with the new approach of combining the QRA2, photo-toxicity and systemic toxicity assessment.
- The target of the RIFM Safety Assessments is humans and their safety while handling the finished consumer products. The categorization of some product categories such as pet products; only relates to the human exposure during the application of such products, not to the exposure of the product on the pet. As a consequence, the assessment of safety of such finished consumer products with regard to animals is outside the scope of IFRA/RIFM and is the responsibility of the manufacturer.

The creative perfumery procedures at TopWosk Fragrances ensure that fragrance compounds are composed only of ingredients approved by our safety clearance process and satisfy, according to the current state of knowledge, the safety requirements for the intended application under normal and reasonably foreseeable conditions of use.

While TopWosk maintains its IFRA Category 6 definition for “Fragrance,” TopWosk recognizes that for applications such as mouthwash and toothpaste—where incidental

ingestion may occur—the customer may need to label their end product ingredient list (i.e., INCI) with “Flavor” instead of “Fragrance,” as referenced in TopWosk’s documentation. This decision rests with the customer, per their judgment, as the manufacturer of the end product.

For other types of applications or use at higher concentration levels, a new safety evaluation may be necessary; please contact TopWosk. It is ultimately the customer’s responsibility to ensure the safety of the final product, including additional testing if needed.

Regulatory Affairs & Product Safety, TopWosk Fragrance & Beauty This certificate is generated by calculation based on data for ingredients.

The data in this document has been prepared by TopWosk in accordance with TopWosk’s internal protocols and procedures to evaluate characteristics and/or performance. TopWosk has in place a review and analysis program for all relevant products. Information provided in this document is based on the intentional addition of a substance or on an analytical assessment for the presence of regulatory-controlled chemical targets, where applicable. Trace constituents or contaminants resulting from a raw material manufacturing process are disclosed where legally required. The information contained herein is, to the best of TopWosk’s knowledge, true and
